Course Code	Course Title	ECTS Credits
OGEE-545DL	Oil and Gas Transport	7.5
	Networks	
Department	Semester	Prerequisites
Engineering	Fall, Spring	None
Type of Course	Field	Language of Instruction
Required	Oil, Gas and Energy	English
	Engineering	
Level of Course	Year of Study	Lecturer
2 nd Cycle	$1^{\text{st}}/2^{\text{nd}}$	Dr Constantinos
		Hadjistassou
Mode of Delivery	Work Placement	Co-requisites
Distance Learning	N/A	None

Objectives of the Course:

The main objectives of the course are to:

- Introduce students to onshore oil and gas transmission networks and right-ofway issues
- Learn the prominent pipeline codes, specifications and standards
- Present the fundamental principles governing pipeline hydraulics
- Familiarize attendees with the technical characteristics of pumping and compressor stations and coolers
- Outline the most common pipeline defect mechanisms
- Explain the major cleaning, monitoring and maintenance techniques
- Detail the operational hazards, safety, and physical security issues and cyberattacks risks

Learning Outcomes:

After completion of the course students are expected to:

- Learn about the economic and technical issues of pipeline networks
- Familiarize themselves with right-of-way and access to pipeline systems
- Be aware of the important pipeline codes, specs, standards & regulations
- Master the fundamental flow equations and physics of gaseous and liquid flow in conduits through their application in a pipeline (simulation) network
- Acquaint themselves with the technical matters pertaining to liquid flow pumping and compressor stations and coolers
- Understand the most frequent pipeline defects mechanisms including crack formation, corrosion, and erosion
- Know the most common internal oil & gas pipeline cleaning methods, flow and pressure monitoring and maintenance methods
- Be aware of the operational hazards of pipeline, safety, physical security issues

and cyber-attacks

Course Contents:

- Technical, business and economic issues of oil & gas trunklines, transmission, and distribution networks
- Pipeline codes, specifications, international standards and regulations
- Pump and compressor types including reciprocating and centrifugal systems, prime movers such as electric motors, internal combustion engines, gas turbines
- Bernoulli equation, laminar and turbulent flow, equations of flow: mass conservation and Navier-Stokes
- Frictional losses, pressure drop, flow rate and velocity measurements and valves
- Engineering aspects of liquid fuel pumps, gas compressor stations and cooling machinery
- Pipeline material defects and protection techniques such as corrosion protection and erosion mitigation
- Most popular internal oil & gas pipeline cleaning methods, flow and pressure monitoring techniques and maintenance strategies
- Computer simulation of a pipeline system; flow and pressure characteristics, terrain elevation, power requirements
- Vibration issues, flow instabilities, cavitation issues, fire hazards, physical security and protection and cyber-threads

Learning Activities and Teaching Methods:

Lectures, Online Questions, Projects, Discussion

Assessment Methods:

Assignments, Online Exercises, Final Exam

Required Textbooks/Reading:

Authors	Title	Publisher	Year	ISBN
Liu Henry	Pipeline Engineering	Lewis	2003	0587161400
		Publishers		

Recommended Textbooks/Reading:

Authors	Title	Publisher	Year	ISBN
Dickenson, C. T.	Valves, Piping and	Elsevier	2007	185617252
	Pipelines Handbook			
Bruce E. Larock,	Hydraulics of	CRC Press	2000	0849318068
Roland W. Jeppson	Pipeline Systems			
& Gary Z. Watters	-
