2005   University of Surrey (Guilford, UK)

7. Research

Since 1995, Prof. Themistocleous has participated in the following research and development projects:

2024-Today	**Neolaia:** https://neolaiacampus.eu/ is the alliance of young European Universities for digital natives, which stands for inclusion, gives personal and tailor-made answers, strengthens democracy and encourages their members to make a difference, becoming game-changers.Prof. Themistocleous is the WP leader for the WP9 which is responsible for introducing the metaverse to 9 campuses in 9 countries across Europe by offering a course on and in the Metaverse and establishing metaverse labs to provide European citizens with practical metaverse skills. **Role: Scientific coordinator for WP9**
2024-Today	Agora: https://agora-mariecurie.eu/ Funded by the Marie Skłodowska-Curie Doctoral Network and supported by a consortium of academic and industry leaders, AGORA promotes forward-thinking innovations that resonate with European values and global technological advancements. The AGORA project values practical experience and strong industry connections. Thus, early-stage researchers involved in AGORA will fulfill physical mobility around Europe at both an academic institution and an industry organization. **Role: Metaverse, Web 3.0 and Blockchain Advisor & PhD supervisor**
2019 – 2021	**Blockpool:** Blockpool.eu (https://blockpool.eu/) aims to enhance SME innovation capacity by providing better innovation support. It uses the power of intermediary organisations (clusters, federations) and cross-regional industrial networks to pilot the acceleration of SME uptake and deployment of DLTs. The project aims to accelerate the cross-border uptake and deployment of DLTs by/to European SMEs. Blockpool.eu aims to grow beyond the Pilot Project to become a sustainable Portal for DLT deployment. **Role: Scientific coordinator**
2019 – 2022	**PARITY** aims to enable the set-up and operation of local flexibility markets at the distribution network level via a holistic offering encompassing: (a) A smart contract enabled, blockchain based local flexibility market platform (LFM), (b)IoT enabled DER Flexibility management tools – both in a peer-to-peer distributed fashion, but also through a centralised aggregator and (c) Smart Grid monitoring and management tools to enable the DSO to optimally manage the low voltage distribution network in the presence of increasing intermittent RES penetration and with the aim to contain the problems they create to grid stability. **Role: Scientific coordinator**
2017 – 2019	**Blockchain in Energy:** The project seeks to disrupt the energy market by developing an innovating system that manages the exchange of energy loads between prosumers through blockchain technology. The project is conducted in collaboration with Intelen S.A. and it will initially be available to the British and Dutch energy markets. **Role: Scientific coordinator and system architect**
2016 – 2019	**Cloud Database Appliance (CDBA).** The project aims at producing a European Cloud Database Appliance for providing a Database as a Service able to match the predictable performance, robustness and trustworthiness of on premise architectures such as those based on mainframes. The project will evolve cloud architectures to enable the increase of the uptake of cloud technology by providing the robustness, trustworthiness, and performance required for applications currently considered too critical to be deployed on existing clouds. **Role: Scientific coordinator**

2015 – 2017	**Smart Bank.** The goal of the project was to assess project management tools and to design and implement a novel solution that supports managers who run multiple projects simultaneously. The project was sponsored by an Italian bank and the final product of this project was adopted by the bank. **Role: Scientific coordinator**
2015 – 2016	**FashUP –** FashUp is an innovative mobile application that was developed for an Italian organization that is based in Milan. Fashion retail stores (like clothing and shoes) upload their shop windows using FashUp. Potential clients from other Italian cities or countries explore Fashup before visiting Milan and thus saving time from shopping. The application uses advanced promotion techniques and it has resulted in increased sales. **Role: Scientific coordinator and system architect**
2013 – 2017	**e-Sens.** The project was launched in 2013 by the European Commission and involved over 100 public and private actors from 22 countries. Its job has been to consolidate and solidify the work done in previous Large-Scale Pilots, providing generic IT solutions for cross-border communication which can be applied to any policy domain. During its four years of operation, e-SENS succeeded in creating a pan-European set of IT building blocks for digital public services that embrace both national and sectorial diversity and facilitate interoperability. **Role: Researcher**
2013 – 2015	**PINCLOUD**. The project "Providing Integrated eHealth Services for Personalized Medicine using Cloud Infrastructures (PINCLOUD)" was funded by the GSRT under the "Cooperation II" program and aimed at the development of integrated e-health services using cloud computing, IoT, mobile computing and advanced IT solutions leading to innovative integrated e-health services such as: personal healthcare records, electronic referral, e-prescription, and homecare. **Role: Project and scientific coordinator**
2009 – 2012	**PEPPOL**. Member of the Pan European Public Procurement On Line (PEPPOL) research team. PEPPOL was funded by the EU under the Competitiveness and Innovation Framework Program (CIP) and is an important cross-border initiative to develop IT infrastructures and services for the creation and operation of pan-European web applications for public procurement. PEPPOL also facilitates the electronic exchange of orders, invoices and catalogs between buyers and suppliers in different Member States. **Role: Researcher**
2009 – 2011	**STAMINA**. STAMINA project which was funded by the European Union under the Leonardo Da Vinci program. STAMINA studied errors that are related to drug production. It examines practices used in aircrafts maintenance as both drug production and aircrafts maintenance processes are critical for human beings and they are both affected by similar human factors. STAMINA created best practices that were used to develop eLearning courses for drug production staff. **Role: Scientific coordinator**

2008-2009	**Hospital Executives Training** on "Managing Large ICT Projects in Healthcare Organizations" **Role: Scientific coordinator and lecturer**
2006 – 2007	**REFOCUS**. REFOCUS project funded by the European Union and related to the development of innovative models for distance learning for workers over 40 years of age. Six different institutions from different countries were involved in the project. **Role: Scientific coordinator**
2004 – 2007	**Network for e-Government Integration and Systems Evaluation (e-GISE).** The project was funded by EPSRC (British Research and Technology Funding Facility). It was essentially a knowledge dissemination network in the field of eGovernment Information Systems evaluation and integration. More than 25 researchers from 19 different institutions were involved in the project. **Role: Researcher**
2004 – 2006	**Improving Supply Chain Management (SCM) in the National Healthcare Service (NHS).** The project was funded by the British National Healthcare Service (NHS) and aimed at analyzing, improving and integrating Supply Chain Management (SCM) related business processes. **Role: Scientific coordinator**
2003 – 2004	**Integrating CRM with Local Government IS.** The goal was to create an integrated IT infrastructure that will be used by the municipal authorities of a London borough of Havering. Due to its innovative nature the project was co-funded by ORACLE UK and Havering Borough and divided into three main phases: (a) analysis and redesign of business processes; (b) design and development of the technological solution; and (c) evaluation. **Role: Scientific coordinator**
1999 – 2001	**Operational Program for Education and Initial Vocational Training - AMEA.** The project aimed at developing a teleworking and eLearning center for people with disabilities. One of the outcomes of the project was the book entitled "Teleworking of People with Disabilities" that was co-edited by Prof. Themistocleous. The book was adopted by the GSRT and distributed to relevant groups, organizations and people with disabilities. **Role: Project Manager and Researcher**
1999 – 2000	**Operational Program for Education and Initial Vocational Training - ARISTOTELIS.** The aim of this project was to design and develop a pilot e-learning system. The pilot system delivered four different modules to high school pupils in five different cities in Greece. **Role: Researcher and Programmer**
1999 – 2000	**Operational Program for Education and Initial Vocational Training – eLearning Centre**. The project resulted in the development of an eLearning platform for Athens University of Economics and Business and facilitated various modules such as e-Commerce and e-Marketing. **Role: Researcher and Programmer**
1999 – 2000	**Operational Program for Education and Initial Vocational Training – Education Without Limits**. The project aimed at developing a pilot on-line master program that jointly run by the Technical University of Crete, the

University of Macedonia and the University Athens University of Economics and Business. **Role: Programmer**

1999 – 2000   **Operational Program for Education and Initial Vocational Training - Certification**. The project investigated certification methods of distant learning structures. In this context, Prof. Themistocleous together with six other researchers were assessed by the British organization Pitman and secured the right to certify e-learning systems. This right was secured following successful follow-up of specialized seminars by Pitman. **Role: Programmer**

1998 – 2000   **ADAPT Kalavrita.** The main aim of the project was to create an integrated e-commerce environment in the wider region of Kalavrita. Among other applications, the project developed online shops, hotel reservation systems, web applications for the Museum and the Ski center, the installation of smart card systems in the ski resort etc. **Role: Project Manager and Programmer**

1998 – 2000   **ADAPT Pegasus**. Pegasus investigated eCommerce best practices and produced a best practice guide that was distributed to small and medium-sized enterprises in Northern Greece. A multimedia CDROM on eCommerce and its applications was also developed. **Role: Researcher and Programmer**

1998 – 2000   **ADAPT Crete.** The primary goal of this project was to reengineer the business processes of a large chain of retail stores in Crete to adopt eCommerce technologies and practices. In addition to this, an e-learning center for business executives was developed. **Role: Researcher and Programmer**

1998 – 2000   **ESPRIT ACTIVE**. ACTIVE was funded by the EU ESPRIT programme and focused on the creation of an innovative online retail sales system by emphasizing on advertising and product promotion. **Role: Researcher and Programmer**

1997 – 1998   **COIN - Classifieds Over Internet**. COIN was an innovative effort to develop a system for uploading and managing online advertisements. In this context eBusiness technologies and dynamic databases were combined to develop the system. **Role: Researcher and Programmer**

1996 – 1997   **Integrated Decision Support System.** This project was funded by OTE and aimed at developing a decision support system to analyze the Greek telecommunications market. The system was developed using OLAP and Data-Warehouse technologies. **Role: Researcher and Programmer**

1996 – 1997   **Project Apollo.** Apollo was one of the first attempts to develop software that creates and manages e-shops. The aim of the project was to evaluate and test the ORACLE Electronic Commerce Server (ICS). The project was funded by Oracle USA and run in collaboration with 10 other research teams worldwide. The evaluation led to the modification and configuration of the final product that produced by ORACLE. **Role: Researcher and Programmer**

1995 – 1996   **EUROMEDIES - European Medical Devices Information Exchange System**. EUROMEDIES was developed as part of the European Medical Devices Vigilance System (MDVS) and focused on the creation of an integrated

information exchange system between EU health ministries and hospitals. EUROMEDIES ensured the asynchronous communication of stakeholders through EDI technology. **Role: Programmer**

1994 – 1997   **EPET HEDIVAN - Hellenic EDI VAN.** HEDIVAN's goal was to identify ways to implement EDI technology in Greece as well as to create the first Value-Added Network (VAN). Eight commercial EDIFACT messages (e.g. Orders) were adapted to the Greek business environment and various applications were implemented to use these messages. The most important result of HEDIVAN was the design of the VAT message and the development of a pilot system for the electronic submission of VAT declaration forms. The project was crowned with complete success since the General Secretariat for Information Systems of the Ministry of Finance adopted the results of the project and used them as a central point of reference for the implementation of the Greek electronic VAT submission system. **Role: Researcher and Programmer**
