

ARISTON
PSYCHOMETRICS

Ariston Graduates

Ariston Graduates is an expert system of personality analysis and professional orientation, which utilises advanced algorithms and mathematical models. The aim of this system and its assessment is to match the personality of a person with the most suitable professions either for people seeking postgraduate studies or wishing to reassess their career and professional activities in general.

aristontest.com

The assessment evaluates the following aspects:

- Personality aptitudes and abilities (numerical, linguistic, mechanical and diagrammatical)
- Self-esteem
- Locus of control
- Vocational – occupational personality
- Specialisations – occupations

The results of this assessment can:

- Identify hidden talents, professional inclinations, aptitudes, abilities, and special features of personality
- Verify whether the personality of the individual can cope with the requirements of a specific work environment or specialisation that requires university education
- Verify the practiced profession and the degree to which this is compatible with the personality of the individual
- Identify alternative vocational interests and occupational areas that are fully compatible with the personality of the individual
- Support tasks concerning recruitment, transfer and promotion, area of specialisation, placement of individuals in departments, vocational and career counselling, and general human resources management
